Sequence 22, Application US/0903333

GENERAL INFORMATION:
APPLICANT: VL, De Chao
APPLICANT: Schuur, Eric
APPLICANT: Henderson, Daniel
TITLE OF INVENTION: FOR CELLS EXPRESSING ANDROGEN RECEPTOR AND METHODS OF UTILE OF INVENTION: THEREOF
NUMBER OF SEQUENCES: 22
CORRESPONDENCES: 22
CORRESPONDENCES:
ADDRESSE: MORRISON & FORESTER
STREET: 755 PAGE MILL ROAD
CITY: Palo Alto

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
Sequence 18 Application US/09814357

Patent No. 6911200

GENERAL INFORMATION:
APPLICANT: Yu, De-Chao
APPLICANT: Yu, De-Chao
TITLE OF INVENTION: METHODS OF TREATING NEOPLASIA
TITLE OF INVENTION: HENGOTHERAPY AND RADIATION
TITLE OF INVENTION: WITH COMBINATION TARGET CELL-SPECIFIC ADENOVIRUS,
TITLE OF INVENTION: WITH COMBINATION TARGET CELL-SPECIFIC ADENOVIRUS,
TITLE OF INVENTION: WITH COMBINATION TARGET CELL-SPECIFIC ADENOVIRUS,
TITLE OF INVENTION: WITHOUT TARGET CELL-SPECIFIC ADENOVIRUS,
TITLE OF INVENTION WINBER: US/09/814,357
CURRENT APPLICATION NUMBER: 08/09/814,357
CURRENT FILING DATE: 2000-03-24
NUMBER OF SEQ ID NOS: 35
SEQ ID NO 18
SEQ ID NO 18

LENGTH: 101

Sequence 4, Application US/09814292
Patent No. US20020120117A1
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Yu, De-Chao
APPLICANT: Abang, Hong
APPLICANT: Henderson, Daniel R.
TITLE OF INVENTION: HUMAN UNOTHELIAL CELL SPECIFIC UROPLAKIN
TITLE OF INVENTION: UROPLAKIN-SPECIFIC TRANSCRIPTIONAL REGULATORY SEQUENCES, AND
TITLE OF INVENTION: METHODS OF USE THEREOF
FILE REFERENCE: 34802201550
CURRENT APPLICATION NUMBER: US/09/814,292
CURRENT FILING DATE: 2001-10-12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         APPLICANT: Yu, De Chao

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NCI_CGAP_FT2'is a subtracted cDNA library_constructed from a pool of 81 RNA samples from Alveolar Macrophages from Alveolar Macrophages while different treatments. The mRNA samples were a mixture of these conditions (times refer to incubations following isolation by bronchoalveolar lavage)

CDNA Library Preparation: DOE Joint Genome Institute:
http://www.jgi.doe.gov
DNA Sequencing: DOE Joint Genome Institute: http://www.jgi.doe.gov
Naming Conventions: EST name is generated by the concatenation of
the JGI Clone Id and the direction of sequencing. The suffix '.rev'
indicates a reverse sequencing read of the insert. It does not
necessarily reflect the orientation of the insert.
Poly-A: Based upon the presence of a run of 14 or more T residues
at the beginning of the sequence, this clone was polyadenylated.
The resulting Poly-T sequence has been removed.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                    1 MTGSTIAPTTDYRNTTATGL......NEKIHRLDGLKPCSLLLQYD 101

ALIGNMENTS

in the B3 or B4 region. Inclusion of such a coding sequence in an adenoviral vector significantly enhances the extent of cytotoxicity, cell killing and virus production. The invention provides replication-competent adenovirus vectors which preferentially replicate in cells that express alpha-fetoprotein (AFP), particularly hepatoma cells. The vectors This is the amino acid of the adenovirus death protein (ADP) of of adenovirus type 2. The ADP coding sequence (see AAV47675), with or without the Y leader, can be introduced into an adenoviral genome, e.g. New adenovirus vector, for treating cancers - comprising an adenovirus gene under the transcriptional control of an alpha fetoprotein Adenovirus death protein; ADP; vector; hepatoma; cancer; alpha-fetoprotein transcription regulatory element; AFP-TRE; hepatocellular carcinoma; hepatoma; gene therapy; human.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This is the amino acid sequence of adenovirus death protein (ADP). Claimed replication-competent adenovirus (Ad) vectors comprise an Ad gene under transcriptional control of a CEA-TRE. The vectors can be used to detect and monitor samples for the presence of cells that allow a CEA-TRE to function, and to selectively kill such cells, especially malignant cells. Vectors containing an ADP gene (see AAVS2966) may be more potent than vectors lacking the gene, making possible more effective treatment and/or lower dosage requirement
comprise at least one adenovirus gene, preferably a gene that contributes to cytotoxicity, under the transcriptional control of an AFP transcription regulatory element (see AAV47654-55). The vectors are useful for conferring selective cytotoxicity to AFP-expressing cells, especially cancer cells. (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New adenovirus vectors, particularly for cancer therapy - comprising adenovirus gene under transcriptional control of carcinoembryonic antigen

This is the amino acid sequence of adenovirus death protein (ADP). Claimed replication-competent adenovirus (Ad) vectors comprise an Ad gene under transcriptional control of a probasin transcriptional response element (PB-TRE, see AAV57334). The vector can be used for detecting cells that allow a PB-TRE to function, especially cells expressing an androgen receptor, such as prostate cells. They can be used to confer selective toxicity to such cells. In particular, the vectors con be used for treating cancers such as prostate cells. They can be used to confer ADP gene (see AAV57354) may render the vector more potent, making possible more effective treatment and/or a lower dosage requirement. An Ad vector has been constructed that contains the ADP gene under control of PB-TRE. Cytotoxicity was demonstrated toward LNCaP (prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MTGSTIAPTTDYRNTTATGLTSALNLPQVHAFVNDWASLDMWWFSIALMFVCLIIMWLIC 60
